ABOUT ME

Software Engineer with 2.4 years of experience building scalable, high-performance web applications using React and TypeScript. Proven experience in frontend development for enterprise applications including Laboratory Information Management Systems (LIMS), Logistics ERP platforms. Strong expertise in state management, performance optimization, reusable component architecture, and responsive UI development. Focused on building production-ready, maintainable, and scalable frontend systems.

TECHNICAL SKILLS

- **Languages** : TypeScript, JavaScript
- **Frontend Frameworks & Libraries** : React.js, Zustand, Redux, React Hook Form, TanStack Query
- **UI Libraries & Styling** : Tailwind CSS, Ant Design, Material UI, Bootstrap
- **Backend** : Node.js, Express.js, REST API Development
- **Database** : PostgreSQL, Redis
- **Tools** : Git, GitHub, Postman, Chrome DevTools, Agile, Jira

PROFESSIONAL EXPERIENCE

Kalavai Digital Private Limited - TheViswaGroup

Jan 2025 - Present

Software Engineer (Frontend Performance & Architecture)

- Led large-scale performance optimization of a LIMS platform, eliminating critical **React anti-patterns in 5,000+ line component**.
- Implemented list **virtualization**, achieving **smooth (~60 FPS)** rendering for large datasets and tables.
- Improved UI responsiveness by **~60–70%**, resolving major lag and freezing in high-traffic workflows
- Refactored monolithic components into modular architecture, **cutting unnecessary re-renders by ~90%**
- Isolated **useWatch** logic into scoped components, preventing **full-tree re-rendering** on input changes
- Applied **useMemo** and **useCallback** to eliminate repeated schema computation and stabilize component rendering
- Reduced network overhead by integrating **TanStack Query caching**, eliminating redundant API calls and **improving load time**.

Aggrandize Venture

May 2024 - Jan 2025

Logistics ERP Application (Shipping Management System)

- Developed a **scalable enterprise-grade** logistics ERP frontend using **React, Material UI, Redux, and React Hook Form**, supporting complex operational workflows.
- Engineered **end-to-end shipping** and approval workflows, enabling structured handling of logistics operations and reducing manual intervention.
- Integrated **REST APIs for real-time data synchronization**, ensuring consistent state across UI and backend systems

PROJECTS

Food Ordering Application:

- Developed a scalable food ordering web application using **React, Redux, and Tailwind CSS** with modular and reusable component architecture
- Implemented centralized state management using **Redux to handle cart operations**, item quantities, and real-time UI updates efficiently
- Built **responsive, mobile-friendly UI** and enforced client-side routing using **React Router for seamless navigation** and improved user experience.

EDUCATION

2020 – 2023

Justice Basheer Ahmed Sayeed College

B.Com
